

Remanufactured Lift Truck Parts

Remanufactured Lift Truck Parts - Lift trucks are very expensive pieces of machines. A 5000lb new electric model could cost between \$18,000 to \$25,000 and some thousands of dollars more would be needed for a battery and a battery charger. The same internal combustion lift truck of the same lift capacity will cost slightly less and the diesel units that are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned forklifts are an option in order to save a great deal of money for the reason that they cost less than half the price of new units.

Several people think they would handle more maintenance problems if they buy a reconditioned forklift and are apprehensive of buying a used lift truck at a sale price. A correctly reconditioned lift truck will perform just as well as a brand new one and whatever doubts of repairs are unfounded. Although your lift will get heavy use, as long as you take proper care of the machinery, it would serve all your requirements and possibly save you a lot of money.

It is vital to determine what the seller means by a refurbished or reconditioned forklift when considering purchasing a used lift truck. A lot of companies do a very good job reconditioning a unit before selling it. This includes disassembling the lift truck, rebuilding the engine, sandblasting the lift and after that reassembling everything and finishing with a fresh coat of paint.

To meticulously reconstruct a forklift engine, a good company would initially totally disassemble it. A heat cleaning system is then used to clean all of the parts. When this step has been completed, all of the components are checked to see if they have any extensive wear, any defects or breakage. Certain components like for example cylinder blocks, connecting blocks, cylinder heads and crankshafts are reground, resurfaced and resized if needed. Various parts such as nuts, bolts, gears and all that. are repaired or replaced as needed.

Once the overhaul has been completed, the engine is rebuilt by hand. After being put back together, a series of tests are applied to the running equipment to be able to check all of the components and be positive there are no leaks or problems. If any problems occur, the crucial adjustments are made.

There is no reason to be alarmed about acquiring reconditioned lift trucks from quality sellers. The process the equipments go through to be rebuilt guarantees the utmost dependability. Maintenance expenses can really work out to be less for the reason that you will avoid the initial phase of higher maintenance projections which a brand new lift truck has as it is broken in. By following routine repairs schedules and taking care of the machine properly, a reconditioned forklift would serve you well.
